

Public vs Private Subnets

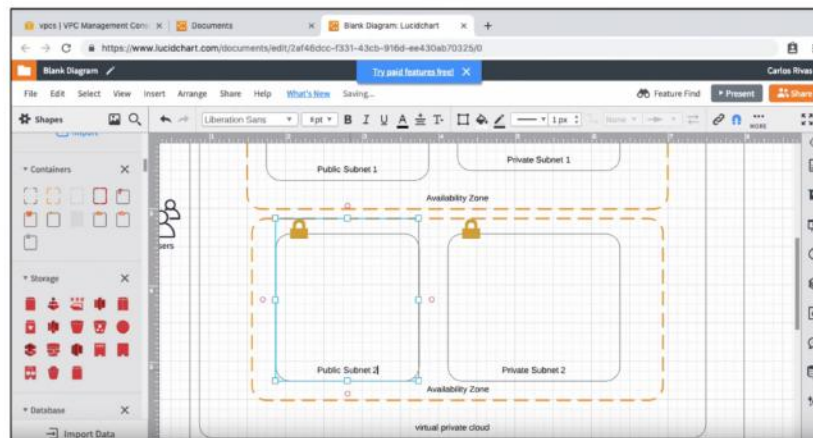

1. Drag 2 new `VPC_subnet` containers onto your canvas.

2. Place one of the newly dragged `VPC_subnet` containers into each of your `Availability Zone` containers.

3. Rename all of your `VPC_subnet` containers to match the following:

Create Private & Public VPC Subnets

- ☐ Add one VPC_subnet containers into each of your Availability Zone

containers

☐

Rename all of your VPC_subnet containers
