

Important: Before this section we have taken the liberty of adding an **Amazon EC2 Instance** directly inside of **Public Subnet 1** & our **AutoScaling**. Please take the time to add this to your diagram before continuing with this exercise.

1. Search shapes panel for **Compute** section and find the **Application Load Balancer**.

2. Drag the **Application Load Balancer** onto your canvas and place it on the right side of your **Internet Gateway**.

Add a Load Balancer to your Diagram

- ☐ Add a **Application Load Balancer** to the right side of your **Internet Gateway**.
